AUTOMATED TESTING SOLUTIONS

**MODERN TESTING SOLUTIONS TO STREAMLINE YOUR
BUSINESS WORKFLOW, MINIMIZE FRAUD AND GAIN ACCURACY.**

MorphoTrust USA
A Safran Company

SIMPLIFY KNOWLEDGE AND SKILLS TESTS AND GAIN EFFICIENCY AND ACCURACY

MorphoTrust continues to streamline your business workflow and simplify the daily tasks within Motor Vehicle Agencies (MVA) with our Automated Testing Solutions: MorphoTrust® AutoTest, MorphoTrust® WebTest, and MorphoTrust® RoadTest. All are successful, proven solutions being adopted by states across the U.S. to fight fraud and increase efficiencies.

MORPHOTRUST® AUTOTEST

Easy to Test. Easy to Score.

Automated web-based driver knowledge exams

Today's testing environments provide multiple opportunities for cheating and fraud. Plus, your customers want to be able to complete the testing process as quickly and easily as possible. AutoTest is the answer.

AutoTest helps to increase the speed and efficiency of applicant processing, saving both time and money. With AutoTest, you have the tools your examiners need to effectively manage every aspect of the testing process.

Tests are conducted on kiosks with user-friendly touch screen interfaces and advanced, interactive multi-media content, including 3D simulations, and multiple language

support. Questions are presented via text or voice and can be adjusted by the applicant using zoom and volume controls. Your customers simply enter their answers by touching the computer screen. It's that simple.

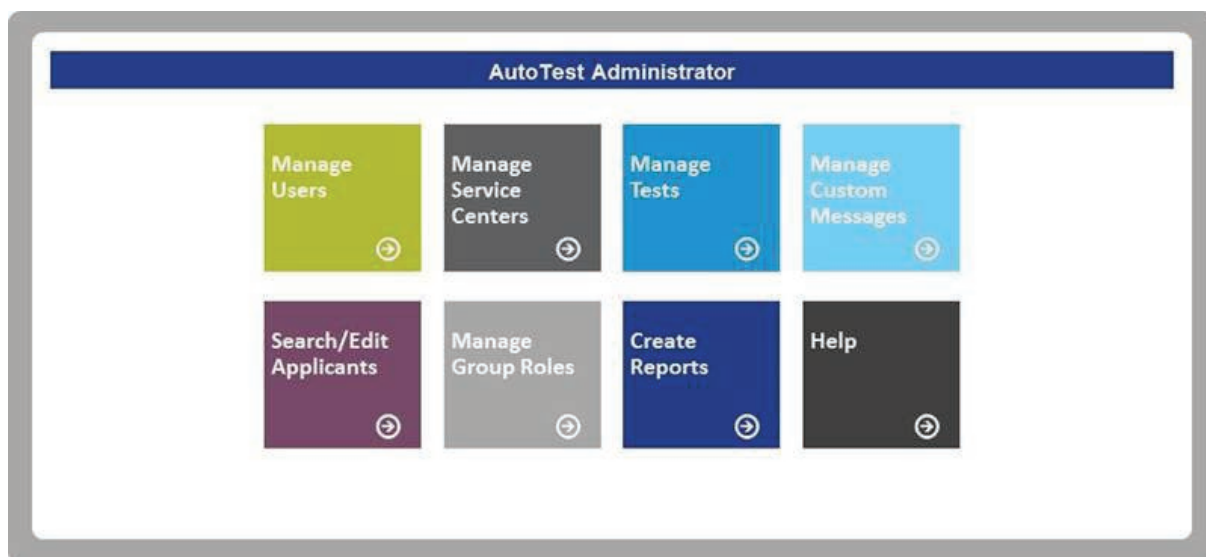

Prior to starting a test, the station performs a verification procedure utilizing security questions, birthday verification and randomized question ordering to deter fraud and confirm that the person taking the test is the actual person seeking the license.

At the end of the test, applicants are immediately notified whether they have passed or failed and can review the correct answers upon the completion of the process, providing

useful feedback that will help them learn and retain the information.

AutoTest can be fully integrated with your front office operations. Tests are automatically generated and results are stored per your business workflow. AutoTest includes the Testing Station as well as the Examiner and Administrator consoles.

- The Examiner console is used to initiate the testing process by entering applicants and designating tests. It also assigns Test Stations, monitors test progress, displays results, reviews tests, prints results and reports, and prints written test forms.

- The Administrator console is the central point of administration for the entire testing network. Equipped with a SQL database, the Administrator application contains the central repository for all testing and results databases, and connects to all Examiner consoles and Test Stations throughout the agency's network. It is the central point of administration and provides an interface for managing the Item Bank (test questions and associated images), Service Centers, Test Stations and for generating statistical reports. Administrator activities are assigned to authorized administrative staff. The Administrator Console is commonly housed at the MVA central office and networked with all the Service Centers.

MORPHOTRUST® WEBTEST

TaaS eliminates the need to visit an agency office

MVAs may also choose MorphoTrust® WebTest which offers a Testing as a Service (TaaS) option for remote test taking. WebTest allows tests to be taken anywhere on a standard PC connected to the internet. Based on our secure Automated Knowledge Testing System (AutoTest), WebTest allows MVAs to offer the flexibility for applicants to take a secure, randomized test in more convenient proctored locations (such as high schools, community college computer labs, or third party driving schools) or at home. This means shorter lines at your offices and savings in time and money without compromising the security of your testing process. Using highly scalable web hosting, services can be delivered to all types of testing sites.

FEATURES AND BENEFITS:

- User-friendly touch screen interface
- Advanced multimedia interaction with 3D simulations
- Multiple language support including American Sign Language (questions in text and audio or video)
- Web-based testing engine
- Anti-fraud features help to eliminate cheating
- Comprehensive and flexible reporting
- AutoTest WAVPrompter, to facilitate recording audio for questions, answers, and screen messages

MORPHOTRUST® ROADTEST

Enhanced Driver Skills Testing on a Tablet

Paper-based skills tests require results to be calculated by hand and entered into a computer manually. Who has time for that? In addition to the loss of precious time, these methods are more prone to errors and fraud. And, completed paper tests are often stored onsite, taking up valuable office space. RoadTest offers a better way.

MorphoTrust® RoadTest is a tablet-based electronic skills test scoring system that is easy for examiners to use. The screen has the same familiar look and feel that the examiners are used to, with a powerful pen-based data capture and form components such as checkboxes, drop-down lists, date/time selections, text and number areas, and special signature fields. And, by tracking test routes via the embedded GPS, we help mitigate fraud by pointing out where off-route travel and suspicious route times have occurred for further investigation.

RoadTest saves the GPS data, map image, test details, all handwritten annotations and signatures, and additional information such as the start and stop time, duration, and the vehicle speeds along the driven route. RoadTest retains all information as part of the testing record and provides documented evidence of the road test for later use.

In addition to automated test scoring, reduction in errors, and elimination of manual data entry, RoadTest generates a range of reports with at-a-glance summaries of activities by examiner. Reports include the location and date of the test as well as the type of test and the individual driver history, enabling your agency to spot trends and anticipate periods of high demand. Tests are easily archived and retrieved electronically, leaving you with extra file space in the office.

FEATURES AND BENEFITS:

- Easy to learn and use
- Improved efficiency and job satisfaction
- Electronic form capture and archiving
- Highly accurate handwriting recognition
- GPS tracking to identify potential fraud (optional)
- Automated reporting to meet your needs
- Integration with motor vehicle systems

REPORTING AND SORTING CAPABILITIES:

- Taken by individual
- By examiner
- By location
- By test type
