SCHEDULER

CUT WAIT TIMES AND EASE CLERK WORKLOAD WITH WEB-BASED APPOINTMENT SCHEDULING

Customers schedule appointments and everyone benefits

Scheduler makes the complex process of appointment scheduling easy. It handles virtually any appointment scheduling situation, giving you the power to choose from a variety of configurable options. The rules-based approach manages all your available resources...people, facilities, even equipment.

Access to Scheduler is secured by username and password authentication. Once logged in, our roles-based security model controls access to all system functions, including the ability to view or edit data on a field-by-field basis.

FULL-FEATURED CAPABILITIES MAKES EVERYONE'S JOB EASIER

System Administrators can:

- Build appointment types and assign rules
- Add/delete/modify resources
- Add/delete/modify service locations and business hours
- Insert custom message for display to customers during self-service Internet appointment scheduling
- Produce reports with Scheduler's flexible web-based reporting engine

Field Office Personnel can:

- Review their own current day or future appointment schedule via Internet or Intranet
- Review schedule for all resources within a service location (supervisor only)
- Use the Scheduler interface to log appointment no-shows
- Use the optional Test Score interface to input results of CDL pre-trip/skills/road tests

CLIENT-HOSTED OR MORPHOTRUST USA-HOSTED OPTIONS

Motor vehicle agencies can elect to host the Scheduler software in their own data center, or have MorphoTrust provide hosting at our secure web hosting facility. Our flexible licensing and hosting options provide a solution for both low-volume and high-volume scheduling environments.

FEATURES & BENEFITS:

- Convenient 24x7 self-service
- Flexible appointment search options
- Automatic appointment confirmation
- Printable appointment instructions
- Automatic e-mail reminder(s) prior to appointment
- Ability to cancel, reschedule or change properties of appointment

ASSISTED SCHEDULING AND OPERATIONS:

- Self-service or assisted scheduling options over the web
- Data collection – during scheduling
- Data-driven customization through administrative screens
- Cancellation and no-show tracking
- Automatic workload balancing
- Roles-based security model controls
- Flexible web-based reporting tools
- Standards-based integration methods with legacy systems
- Client-hosted and MorphoTrust options available

OPTIONAL WORKLOAD BALANCING MEANS LESS STRESS & MORE SMILES

As appointments are made, Scheduler automatically checks the current availability of resources required for the appointment type (i.e. personnel or equipment) and distributes the workload across all available resources. Motor vehicle administrators and supervisors may also elect to manually assign resources to appointments.

SCHEDULING MAY BE ACCOMPLISHED THROUGH THE FOLLOWING OPTIONS:

- **Assisted Scheduling** – The customer calls the appropriate telephone number to schedule an appointment. The customer service representative uses the Scheduler interface to search for available appointment times and locations, gather all required information from the applicant, and schedule the appointment.
- **Self-Service Scheduling** – The customer uses the self-service Scheduler interface accessible on your website to search for available appointment times and locations. Whether scheduling is conducted in assisted or self-service mode, Scheduler performs a real-time search for available appointment slots. Committed slots are automatically blocked out, eliminating the possibility of double-bookings.

Scheduler allows motor vehicle personnel to display customizable messages once an appointment is confirmed, reminding customers of important appointment pre-requisites, such as required documentation. Our automated email appointment reminders help reduce the instance of no-shows. Through self-service scheduling, motor vehicle employees have the tools needed to easily access individual schedules to assist them with planning.

- **Integration** – Scheduler offers built-in integration with the AutoTest Automated Driver Testing System, allowing an administrator to eliminate redundant input of customer information.
